ChatGPT Is Banned in Italy Over Privacy Concerns

nytimes.com/2023/03/31/technology/chatgpt-italy-ban.html

March 31, 2023

The artificial intelligence tool ChatGPT was temporarily banned in Italy on Friday, the first known instance of the chatbot being blocked by a government order.

Italy's data protection authority said OpenAI, the California company that makes ChatGPT, unlawfully collected personal data from users and did not have an age-verification system in place to prevent minors from being exposed to illicit material.

Italy is the first government to ban ChatGPT as a result of privacy concerns. In China, North Korea, Russia and Iran, the service is unavailable because OpenAI decided not to make it accessible.

Italy's decision is a sign of the policy challenges emerging for the developers of cutting-edge A.I. after the release of ChatGPT. The program has dazzled users with its ability to draft essays, engage in humanlike conversations and perform more complex tasks like writing computer code, but it has raised alarms about the spread of misinformation, the effects on employment and broader risks to society.

This week, more than 1,000 technology leaders and researchers called for a moratorium on development of the most advanced A.I. systems so that safety policies could be put in place. The Center for A.I. and Digital Policy, an advocacy group pushing for the ethical use of technology, has asked the U.S. Federal Trade Commission to block OpenAI from releasing new commercial versions of ChatGPT.

In Italy, regulators have told OpenAI to block internet users in the country from gaining access to ChatGPT until the company turns over additional information. The company has 20 days to provide the agency with the material and possible remedies before a final decision can be made about the future of the product in the country.

Regulators cited a March 20 data breach that exposed conversations and the payment details of some users. The agency said OpenAI could be fined up to 20 million euros (about $22 million) or 4 percent of its worldwide annual revenue.

In a statement, OpenAI said it had disabled ChatGPT for users in Italy and that it was committed to protecting people's privacy.

"We actively work to reduce personal data in training our A.I. systems like ChatGPT because we want our A.I. to learn about the world, not about private individuals," the company said. "We also believe that A.I. regulation is necessary."

As of 5 p.m. on Friday in Italy, word had not yet reached the chatbot that it would be blocked in the country. When asked by a user there if it would be banned in Italy because of privacy concerns, ChatGPT replied, "There should be no concerns."

"I am an artificial intelligence language model that can be accessed from anywhere in the world as long as there is an internet connection," the chatbot said.

OtterPilot Overview

5 days ago · Updated

Follow

OtterPilot can automatically join your Zoom, Google Meet, or Microsoft Teams meetings, and transcribe the meetings in real-time. With OtterPilot, you get many features including Automated Summary, Automated Slide Capture, and Meeting Summary. Learn about OtterPilot below.

Large Language Models

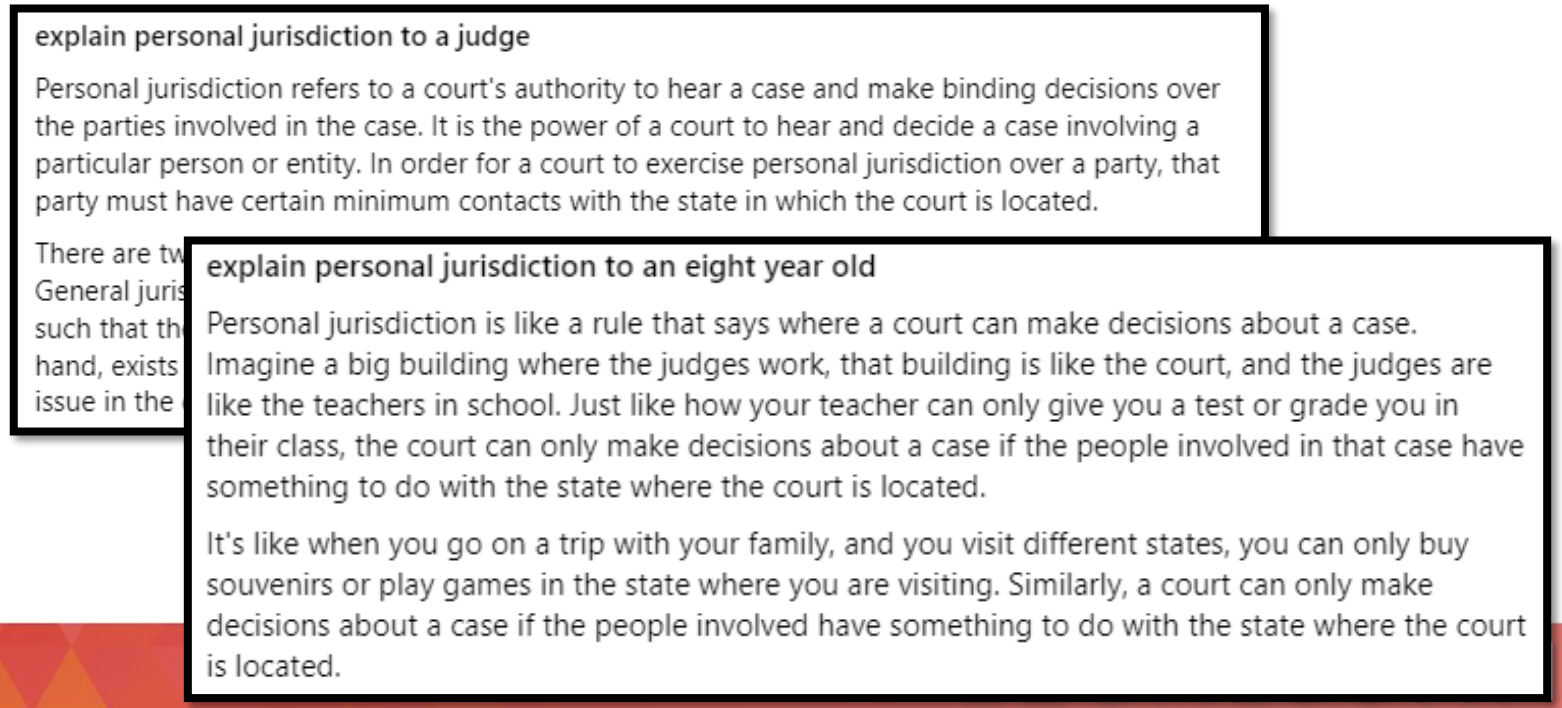
- A type of artificial intelligence (AI) technology that uses advanced machine learning algorithms to process and generate natural language.

- These models are trained on massive amounts of text data, allowing them to generate human-like text…

- *These have been around since at least the 1960s.*

Nov. 30, 2022 – Chatgpt prototype

100,000,000 users in 2 months



Large Language Models

A large language model

- "understands" through statistical analysis and probability
- "creates" through combination of pattern, probability, and random sampling

Large Language Models

Good at:

- Coherence
- Summarizing large chunks of text
- Re-writing text
- First drafts when provided with detailed prompts

Bad at:

- Searching for information (though some have been integrated with search engines)
- Providing accurate facts

Recognized Dangers

- Fictional information – dangerously plausible nonsense
    - LLMs will make up fictional cases, citations, and quotes
- Training bias – GIGO
- Privacy – who “learns” from your prompts?
- Job elimination
- Weaponization

what are the things that lawyers need to know in a presentation about large language models

When presenting about large language models like GPT-3, lawyers should be aware of several key aspects to ensure an accurate and informative presentation. Here are some important points to consider:

1. Overview of large language models: Start by providing a clear introduction to large language models, explaining what they are and how they work. Describe their ability to generate human-like text, understand context, and handle a wide range of tasks.
2. Benefits and applications: Discuss the various benefits and potential applications of large language models in the legal field. This may include tasks such as legal research, contract analysis, drafting legal documents, predicting case outcomes, and providing legal advice.
3. Limitations and challenges: Highlight the limitations and challenges associated with large language models. Address concerns such as bias in training data, potential ethical issues, limitations in legal expertise, and the need for human oversight and validation of outputs.
4. Data privacy and security: Emphasize the importance of data privacy and security when using large language models. Discuss any measures taken to protect sensitive information and ensure compliance with relevant laws and regulations, such as client confidentiality and data protection.
5. Legal and ethical considerations: Explore the legal and ethical implications of using large language models in the legal profession. Discuss issues like professional responsibility, accountability, the unauthorized practice of law, and potential impact on the attorney-client relationship.
6. Reliability and transparency: Address the challenges of interpreting and verifying the outputs of large language models. Discuss the need for transparency in understanding how the models arrive at their conclusions, and how their outputs should be treated as suggestions or starting points rather than definitive legal advice.
7. Regulation and policy: Discuss any existing or proposed regulations or policies that are relevant to the use of large language models in the legal field. This may include discussions on intellectual property rights, liability, and disclosure requirements.
8. Collaboration between AI and lawyers: Highlight the potential for collaboration between AI systems and legal professionals. Emphasize how large language models can assist lawyers in their work, enhance efficiency, and improve access to justice, while underscoring the continued need for human expertise and judgment.
9. Future considerations: Discuss emerging trends and advancements in large language models, such as improvements in accuracy, interpretability, and specialized legal domain models. Address potential future developments and their implications for the legal profession.
10. Q&A and discussion: Allocate time for questions and discussion to address any concerns, misconceptions, or specific interests from the audience. This will help provide a more comprehensive understanding of large language models and their relevance to the legal field.

Remember, it's important for lawyers to understand that large language models are tools and should be used judiciously in the context of legal practice, with a thorough understanding of their limitations and potential implications.

https://gamma.app - Technology Tools for Lawyers

Technology Tools for Lawyers

In today's digital era, technology is transforming every industry, including the legal system. In this article, we will explore some of the most useful technology tools available for lawyers and law firms, from document management software to online legal research platforms.

by Dave Pantzer

Last edited 16 minutes ago

Document Management Software

Benefits

- Efficient management of legal documents
- Saves time and reduces errors
- Enhances collaboration among team members

Popular Tools

- NetDocuments
- LegalWorks
- Worldox

Tip!

Choose a software with cloud-based storage for secure access and automatic backups

Electronic Discovery Tools

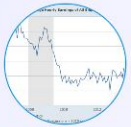
> "When a client has to go into a courthouse, their stress levels are already high. Technology can reduce that stress." - Eddie Greim

Benefits	Popular Tools
• Faster and more efficient document reviews	• KCura Relativity
• Increased accuracy and quality control	• Logikcull
• Cost-effective and reduces labor costs	• DISCO

Timekeeping and Billing Software

Timekeeping Benefits

Accurately track billable hours, monitor productivity, and send invoicing reminders. Examples of tools are TimeSolv, Bill4Time, and PracticePanther.



Billing Benefits

Estimate, track and manage payment of billable hours. Examples of tools are Clio, Zola Suite, and MyCase.

Tip!

Choose software with mobile apps for on-the-go usage and automatic billing reminders.

Online Legal Research Platforms

1. **Benefits**

   Access legal information, cases, and documents quickly and efficiently. Prevents redundant searches and saves time. Examples of platforms are Westlaw, LexisNexis, and Bloomberg Law.

2. **Tip!**

   Choose a platform with advanced search functions, such as natural language processing and citation tracking.

Virtual Meeting and Communication Tools

Benefits

- Cost-effective way to connect with clients, colleagues, and other professionals across the world
- Reduced travel time
- Flexibility with scheduling

Popular Tools

- Zoom
- Skype
- Google Meet

Tip!

Use tools with live transcription or recording capabilities to prevent any misunderstandings or missed information.

Data Security Best Practices for Law Firms

Physical Security

Secure client files and sensitive information with physical measures like locked cabinets and a shredder.

Technical Measures

Use strong passwords and two-factor authentication, keep software up-to-date, and encrypt all sensitive data. Use technology tools like Firewalls, Antivirus, VPN, and Password Managers.

Tip!

Be transparent with clients about your data security measures and create a breach response action plan.

The Future of Law with Technology

> "The legal industry is immersed in a time of change, which presents significant opportunities. The pandemic has made it clear that technology is indispensable for rapidly adapting and succeeding in challenging times." - Margaret Hagan

Artificial Intelligence

AI helps with document analysis, e-discovery, and predicting case outcomes.

Blockchain Technology

Ensures digital security and enhances transparency while reducing costs.

Virtual Reality

Offers immersive and interactive experiences like simulated courtrooms, meetings, and training.

Tip!

Stay current with the latest developments and embrace the benefits of technology.

how do i get an interpreter?

Terms of Use

Reset

To get an interpreter, you can ask the court clerk for a form or help in getting an interpreter. If you have a lawyer, you can ask the lawyer to arrange for an interpreter. If the clerk does not speak your language, they can call a special phone number where an interpreter can assist the two of you to make the arrangements for free. To request a spoken language interpreter, you can submit a request for a spoken language interpreter (form cc-dc41) to the court where the case will be heard. Requests for an interpreter should be submitted to the court no less than thirty (30) days before the proceeding for which the interpreter is needed. The court will appoint an interpreter for free if you do not understand English well enough to fully participate in the hearing, or if it is difficult for the judge, the lawyers, or the jury (if there is one) to understand your English.
